Negativna binomska porazdelitev

$$X \sim \text{negBin}(n = 80, p = 0.2)$$

$$P(X = k) = \binom{k-1}{n-1} p^n \cdot (1-p)^{k-n}$$

```
> n <- 80  
> k <- 350  
> p <- 0.2  
> choose(k - 1, n - 1) * p^n * (1 - p)^(k - n)  
[1] 0.004890492
```

V R je funkcija parametrizirana na število neuspehov.

```
> dnbinom(k - n, n, p)  
[1] 0.004890492  
> pnbinom(k - n, n, p) - pnbinom(k - n - 1, n, p)  
[1] 0.004890492
```

Normalna aproksimacija

$$X \sim \text{negBin}(n = 80, p = 0.2)$$

$$E(X) = \frac{n}{p} = \frac{80}{0.2} = 400$$

$$D(X) = \frac{80 * 0.8}{0.2^2} = 1600$$

$$X \sim N(400, 40^2)$$

$$P(X \leq 350)$$

```
> pnorm(350, 400, 40)
```

```
[1] 0.1056498
```

Geometrijska porazdeitev

```
> n <- 80
```

$$X_k \sim \text{geom}(p = 0.2), \quad k = 1, 2, \dots, 80$$

Koliko poskusov do prvega uspeha

$$P(X = k) = (1 - p)^{k-1} * p, \quad k = 1, 2, \dots$$

```
> set.seed(789)
```

```
> X <- rgeom(n, p = 0.2) + 1
```

```
> X[1:5]
```

```
[1] 1 20 16 5 5
```

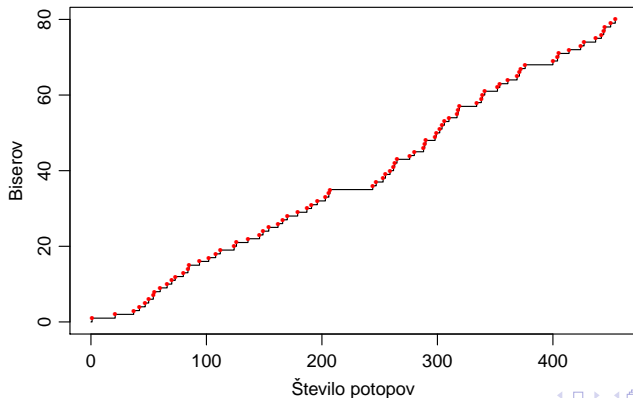

```
> (Y <- sum(X))
```

```
[1] 454
```

Zakaj $+1$? Poglejte v pomoč funkcije `rgeom`.

Potapljaški poskus

```
> par(mar = c(3, 3, 2, 1), mgp = c(2, 0.7, 0))  
> X <- c(0, X)  
> plot(cumsum(X), 0:n, type = "s", ylab = "Biserov",  
+      xlab = "Število potopov")  
> points(cumsum(X[-1]), 1:n, col = "red", pch = 16,  
+        cex = 0.5)
```

Simulacija

```
> n <- 350  
> skoljka <- c("prazna", "biser")  
> izid <- sample(skoljka, n, replace = TRUE)  
> table(izid)
```

```
izid  
biser prazna  
  177    173
```

Simulacija z neenako verjetnostjo

```
> n <- 350
> skolkja <- c("prazna", "biser")
> izid <- sample(skolkja, n, replace = TRUE, prob = c(8,
+      2))
> (t <- table(izid))

izid
  biser prazna
    83    267

> t["biser"]/sum(t)

  biser
0.2371429
```

Drug pristop

```
> p0 <- 0.2  
> izid <- runif(n) <= p0  
> (t <- table(izid))
```

```
izid  
FALSE  TRUE  
  296    54
```

```
> t[2]/sum(t)  
  
      TRUE  
0.1542857
```

Z logičnimi vrednostmi lahko računamo:

```
> sum(izid)  
[1] 54  
  
> sum(izid)/length(izid)  
[1] 0.1542857
```

Veliko število potapljačev N

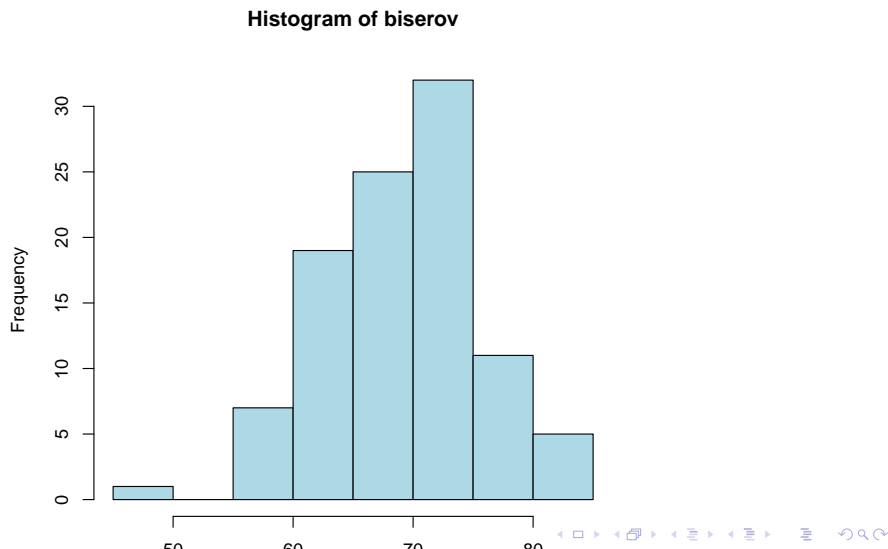

```
> N <- 100

> X <- matrix(runif(N * n) <= p, N, n)  
> X[1:4, 1:10] + 0
